

ABSTRACT

Illuminated building address signs. A letter and number display panel system having a plurality of translucent display panels is provided. An electrical supply unit may be provided, with a power adaptor as necessary. In one embodiment, an ambient light photo sensor and controller switches the unit on at the onset of darkness. The display panels contain a multi-level light source and an identification symbol which is illuminated by the multi-level light source. The translucent display panels contain electro luminescent identification symbols of numbers and letters. The display panel system may include controller operation for display mode wherein the display panels are powered in a flashing configuration for emergency purposes.
